

CLAMPING ELEMENT | PNEUMATIC MKRS3200A

► PRODUCT ADVANTAGES

► Independent of the manufacturer

For circular guides and shaft guides

► Energize to open (NC)

through spring-loaded energy storage

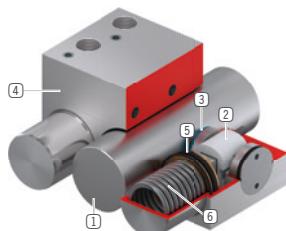

► high durability

5 million static clamping cycles

► Safety element

Safe clamping in case of energy failure

► TECHNICAL DETAILS

① Circular guide

- Compatible with circular and shaft guides

② Wedge-type gear

- Power transmission between piston and clamping jaw

③ Clamping jaw

- Pressed at the circular guide

④ Housing

⑤ Pneumatic piston

- The piston moves the wedge-type gear longitudinally

⑥ Spring-loaded energy storage

- For non-pressurized closing of the clamping unit

► INFORMATION ON THE PRODUCTS

APPLICATION SCENARIOS

- Clamping in case of pressure drop
- Clamping without energy requirement

FURTHER INFORMATION

► Special variants on request, e.g.

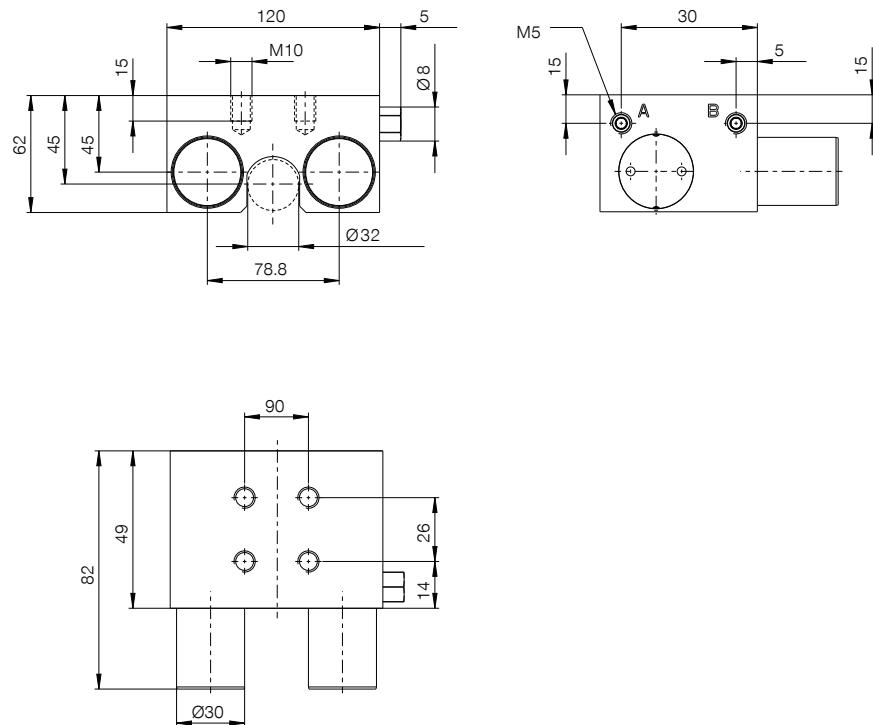

With proximity switch monitoring

With low opening pressure (3.0 bar)

With additional air connection (from above, from the front)

made of stainless steel

► TECHNICAL DRAWINGS

(A) Connection opening (both sides possible, only one connection necessary)

(B) Vent filter (one-sided) Connection can be used as PLUS-connection (both sides possible, only one connection necessary)

► TECHNICAL DATA

Order no.	MKRS3200A
Operation	pneumatic
Holding force [N]	1650
Theoretical holding force ($\mu=0,1$) [N]	2,063
PLUS connection possible	No
Operating pressure [bar]	5.5 ... 6.5
B10d value	5,000,000
Positioning accuracy +/- [mm]	0,02
Opening time [s]	0,03
Closing time [s]	0,035
Operating temperature [°C]	-10 ... +70
Weight [kg]	2,5
Shaft Ø [mm]	32
Function	Clamping
Condition	NC (Normally Closed) closed without pressure
Installation direction	from above
Air volume per cycle [cm³]	19
Certifications	CE / UKCA / LABS / REACH / RoHS

Schematic drawing. General tolerances in accordance with DIN ISO 2768 T1-f/T2-H. Edges in accordance with ISO 13715. The element may only be used in the axial direction of movement. For rotation-al use, clarification with the technical department is required. Element has no guiding properties. Guidance must be provided externally. The holding force is the maximum force that can be applied in the axial direction. Each clamping and braking element is tested in a 100% inspection before delivery for the specified holding forces on a hardened round rail with a lightly oiled lubricating layer (ISO-VG 68). The use of other lubricants or rail coatings can influence the coefficient of friction. The operating instructions must be observed before commissioning. We reserve the right to make technical changes in the course of further development. The latest and further data can be found online and in the operating instructions at www.zimmer-group.com.
