

# CLAMPING AND BRAKING ELEMENTS | PNEUMATIC

## LBPS3501AS2-A

### ▶ PRODUCT ADVANTAGES

- ▶ **broad range of products**  
For all common profile rail guides
- ▶ **Safety element, energize to open (NC)**  
Safe braking in case of energy failure, through spring-loaded energy storage
- ▶ **high durability**  
5 million static clamping cycles
- ▶ **Small and narrow design**  
By using U-form piston
- ▶ **Maximum flexibility**  
Additional air connection from above
- ▶ **Simple status sensing**  
Querying the piston position with magnetic field sensor

### ▶ TECHNICAL DETAILS

- ① **Profile rail guide**
  - Available for all common profile rail guides
- ② **Wedge-type gear**
  - Power transmission between the pistons and clamping jaws and brake shoes
- ③ **Clamping jaws and brake shoes**
  - Pressed at the free surfaces of the profile rail guide
- ④ **Narrow housing**
- ⑤ **Pneumatic piston**
  - The piston moves the wedge-type gear longitudinally
- ⑥ **Spring-loaded energy storage**
  - For non-pressurized closing of the clamping unit

### ▶ INFORMATION ON THE PRODUCTS

#### APPLICATION SCENARIOS

- ▶ **Clamping in case of pressure drop**
- ▶ **Braking linear motors**
- ▶ **Clamping without energy requirement**

#### FURTHER INFORMATION

- ▶ **Spacer plate**  
In addition, a spacer plate might have to be ordered as height compensation, depending on the height of the rail carriage (dimension D).
- ▶ **Special variants on request, e.g.**  
With low opening pressure (3.0 bar)

|                    |           |           |               |
|--------------------|-----------|-----------|---------------|
| Track manufacturer | Rail type | Rail size | Carriage type |
| IKO                | LWE       | 35        | LWE..Q        |

## TECHNICAL DRAWINGS

- Ⓐ Connection opening (both sides possible, only one connection necessary)
- Ⓑ Vent filter (one-sided)
- Ⓐ Connection alternative opening
- Ⓛ Magnetic field sensor (both sides)

## TECHNICAL DATA

| Order No.                               | LBPS3501AS2-A                                |
|---|--|
| Operation                               | pneumatic                                    |
| Holding force                           | 1900 [N]                                     |
| Theoretical holding force ( $\mu=0,1$ ) | 2,375 [N]                                    |
| PLUS connection possible                | No   |
| Operating pressure                      | 5.5 ... 6.5 [bar]                            |
| B10d value                              | 5,000,000                                    |
| Positioning accuracy +/-                | 0,05 [mm]                                    |
| Opening time                            | 0.25 [s]                                     |
| Closing time                            | 0.02 [s]                                     |
| Operating temperature                   | -10 ... +70 [°C]                             |
| Weight                                  | 1.1 [kg]                                     |
| Function                                | Clamping and braking                         |
| Condition                               | NC (Normally Closed) closed without pressure |
| Installation direction                  | from above                                   |
| Masking tape can be used                | with masking tape                            |
| Air volume per cycle                    | 12 [cm <sup>3</sup> ]                        |
| Sensor linkage                          | Sensing slot (both sides)                    |
| Connection type                         | Mirroring at the top                         |

Schematic drawing. General tolerances according to DIN ISO 2768 T1-4/T2-H. Edges according to ISO 13715. Element has no guiding properties. Guidance must be external. The holding force is the maximum force that can be applied in the axial direction. Each clamping and braking element is tested in a 100% inspection before delivery for the specified holding forces on a hardened steel rail with a lightly oiled lubricating layer (ISO-VG 68). The use of other lubricants or rail coatings can influence the coefficient of friction. The operating instructions must be observed before commissioning. We reserve the right to make technical changes in the course of further development. The latest and further data can be found online and in the operating instructions at [www.zimmer-group.com](http://www.zimmer-group.com).
